

# Icewave - Interim Presentation

Lorenzo La Spina, Lukas Prantl, Tobias Weiher

**SURFING SIMULATION**

**PHYSICALLY BASED WATER  
TURBULENT LIQUID RENDERING**

**BIG  
IDEA  
BULLSEYE**

# Functional Minimum

- Tsunami Game Engine
  - GameObjects (with basic components)
  - Scene Structure
  - Resource Loaders
- Graphics
  - Raytracer (for water representation)
  - Rasterization based Pipeline (Solid Render Queue)

# Functional Minimum

- Physics
  - Liquid Simulation (4D SDF Grid)
  - Rigidbody Physics (Forces and Velocity)
  - Water-Object Interaction (Sphere)
- Input
  - Basic Input Scheme (simple device messages)

# Low Target

- Tsunami Game Engine
  - Efficient Memory Usage
  - Transparency
  - Graphical User Interface
- Graphics
  - Raytracer
  - Solid
  - Merger
  - GUI
  - Font

# Low Target

- Physics
  - Rigidbody Physics (rotational components and impulses)
  - Water-Object Interaction (arbitrary shapes)
- Input
  - Robust Input Handling System (RawInput API)

# Desirable Target

Work in Progress

# Challenges

- Finding the correct Input Device
  - Problematic integration of some devices (SteamController)
  - Focus on Smartphone integration (via Network, Client/Server)
- Engine Architecture
  - Needs to be easy to use, but performant and efficient
  - Combining different frameworks (Physics/Graphics/Input), but work perfectly together with blackbox usage
  - Extensible and powerful engine!

Thank you!
